## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 38-48 are rejected under 35 U.S.C. 102(b) as being anticipated by Keren (US 5,160,891 A).

With respect to claims 38, 39-43, Keren discloses a method of multinuclear magnetic resonance spectroscopy and imaging comprising the steps of: generating an exciter signal (Column 1, lines 41-44); synthesizing a plurality of synthesized signals appropriate to the atomic species to be studied (Figure 1, #41); mixing the exciter signal with the plurality of synthesized signals, creating a plurality of generated signal (Figure 1, #36); exciting a plurality of atoms having different atomic weights with the generated signals (Columns 1 and 3, lines 41-44 and 40-50); receiving a plurality of experimental signals from atoms excited by the generated signals (Figure 1, #12-#16).

3. With respect to claims 44-47, Keren discloses the step of digitizing the final signals (Figure 1, #42-#46).

4. With respect to claim 48, Keren discloses the means for digitizing each of the signals further comprise separate devices (Figure 1, #42-#46).

***Response to Arguments***

5. Applicant's arguments filed 05/31/05 have been fully considered but they are not persuasive.
6. Applicant argues that Keren fails to teach or fairly suggest exciting a plurality of atoms having different atomic weights.
7. The examiner disagrees with applicant's argument since Keren discloses performing MR studies with two different frequencies wherein it is known that atoms in an element have its own Larmor frequency for every element to resonate wherein every element has atoms with specific atomic weight and therefore, Keren discloses atoms of different atomic weights being excited with their respective Larmor frequency.

***Conclusion***

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2859

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
